Dept. of Electrical and Computer Engineering Seminar

Informational Seminar about the NSF GK-12 Graduate Fellowship Program

Michael Schuette
2005-2006 GK-12 Fellow

Wednesday March 5, 11:00, Dreese Lab 260

The NSF GK-12 program is designed to partner elementary school teachers and scientists in an effort to improve science education. The Ohio State University and Columbus Public Schools are working together to foster collaboration between 3rd – 5th grade teachers and science graduate students. Through participation in the program fellows will hone their communication and teaching skills; teachers will strengthen their ability to teach science concepts; and elementary school students will benefit from inquiry-based, experiment-centered science lessons. Scientists and teachers involved will learn from each other’s unique backgrounds and skills. All of this will lead to a lasting, mutually beneficial relationship between university scientists and local teachers. Anyone with interest in applying for this fellowship should attend.

Eligibility: Fellows should be graduate students in the College of Engineering or College of Math and Physical Sciences. Only U.S. citizens are eligible.

Application Deadline for the 2006 Competition: April 14
