During the quarter there will be a paper review; this will include an in-class presentation. The reviews can be done by a single student or by a group of 2 or 3 -- no groups of 4 are permitted. For multiple person groups, each person must have a separate but related paper and the 2 (or 3) papers are to be discussed as a group.

The papers can be chosen from any of the open technical literature, such as IEEE transactions (both PES and IAS are good sources) and journals (Electrical World, T&D, etc.). The topic must be related to some aspect of protective systems (or their components); please verify with the instructor that the chosen paper(s) is appropriate. A good location to find materials is through www.ieeexplore.ieee.org from an OSU computer connected to the Web.

The review should be type written in the form of a brief technical paper in your own words, not just repeating sentences/paragraphs in the paper. The length is to be between 2 and 3 pages 8.5x11", double-spaced, typewritten. Include a brief abstract and a summary. Give full bibliographical information on the paper reviewed. Figures are not included in the page length specifications.

A 6-minute in-class presentation is required. The in-class presentations will be as soon as someone is ready. Hopefully, 2 or 3 groups will volunteer per day to make their presentation in the near future; if not, the instructor reserves the right to "volunteer" students.

- 28 April – have paper(s) chosen and approved by this date
- in-class presentations to be given during last 3 weeks of quarter; 2 or 3 groups per day [beginning May. 17 and continuing through June 04]
- There will be a guest speaker scheduled for one of those dates.

The written paper is due for everyone on Mon. May 24 independent of when presentation given.
