The report should be typed on 8.5" × 11" paper, and should conform to the following specifications:

1. There should be a title page which includes the project number, the names of the group members, and the date the project is due. It should not contain a page number.

2. Pages should be numbered consecutively, with the title page as page 1. Appendix page numbering is described below.

3. The body of the report should be narrative (i.e. complete sentences should be used), and should include the sections enumerated below as appropriate for the project. Each section should have a numbered section heading. However, each section does not necessarily need to begin on a new page.

   **Introduction:** Succinctly discuss the project and its goals.

   **Design:** Briefly give details of any design process that was used in the project. This may include the problem definition, methods of attack and simulation, or symbolic analysis. It should also include any problems encountered with the design and/or software. If the design is given in the project handout, this section may be eliminated.

   **Results:** Include the data gathered for the project. This data should be presented in a clear, concise format such as a table, list, or other form. Also include answers to any questions posed in the project handout.

   **Conclusions:** Briefly summarize the project. If appropriate, discuss the similarities and differences between the expected and actual results of the simulation. Also include what was learned, and any additional observations.

4. All bulky data (trace printouts, schematics, simulation lists, or any other item which would interrupt the flow of the report) should be included as an **appendix**.

   (a) Appendices should be lettered and include a title which indicates the content of the appendix.

   (b) If a particular appendix has multiple pages, number them sequentially along with the letter of the appendix (e.g. “B1, B2, B3, …”).

   (c) When referencing data in the report, include a parenthetical reference to the appropriate appendix. For example, “…this delay can be seen in the timing trace (Fig. 1, A3).”

   (d) Provide a caption for each figure, table, list, etc.
