

INTRODUCTION

This manual covers the assembly and installation of the Channel Master Non-Penetrating Pole Mount for use with .90m, 1.0m or 1.2m AZ/EL Antenna Systems. Information on ballast requirements is also included. Read this manual thor-

oughly before beginning system or mount assembly. The system or mount should be installed by qualified antenna installation personnel. For best results in the assembly process, perform each step in the same sequence as listed in this manual.

SPECIFICATIONS

ANTENNA				AZ/EL MOUNT	
6523					
MODEL	6019	6020	6022	MODEL	6031
SIZE	35.43" (.90m)	39.37" (1.0m)	47.34" (1.2m)	AZIMUTH	360°
F/D RATIO	.6	.6	.6	ELEVATION	10° - 70°
FOCAL LENGTH	21.26" (540.0mm)	23.62" (599.9mm)	28.34" (719.8mm)	MAST (TUBE DIA.)	3.0" (76mm)
OFFSET	22.6°	22.6°	22.6°		

PRE-INSTALLATION MATERIALS CHECKLIST

Grounding Rod Clamp, Grounding Block & Ground Wire:

As required by National Electric Code or local electric codes.

Coaxial Cable:

(Size & length required.)

Roofing Paper: (If foam pads are not used, see Pages 15-20)

Two pieces 36" x 72" (to be placed between base frame of mount and roof surface).

Solid Concrete Cap Blocks:

3.6" x 7.6" x 15.6" (Quantity - see Ballast Requirements, pages 15-20).

Cable:

1/8" diameter minimum (1200 lbs. minimum breaking strength) 7 x 7 or 7 x 19 construction, stainless steel or galvanized steel (length as required).

Cable Clamps:

(See pages 15-20) 6 (minimum).

ASSEMBLY TOOLS REQUIRED

The following list of tools are those required for hand assembly and installation of the antenna.

- 1 - Compass
- 1 - Clinometer
- 1 - Torque Wrench
- 1 - Phillips Screwdriver
- 1 - Ratchet Wrench (3/8" Drive)

- 1 - 10mm Socket (3/8" Drive)
- 1 - 10mm Nut Driver
- 1 - 13mm Socket (3/8" Drive)
- 1 - 13mm Nut Driver

UNPACKING AND INSPECTION

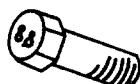

The antenna and cap mount shipping carton should be unpacked and contents checked for damaged or missing parts. Should there be any parts that are damaged or missing, contact:

**Technical Service
Channel Master
1315 Industrial Park Drive
Smithfield, N.C. 27577 U.S.A.
(919) 989-2210**

CARTON CONTENTS - MODELS 6523, 6920 & 6922

QTY.	NAME & PART NUMBER	QTY.	NAME & PART NUMBER
1	SMC Antenna PN 3040646-02 (1.2m)** PN 3040642-02 (1.0m)**	1	Mast PN 601047-02
	Ku-Feed Carton w/Hardware PN 6100016* **	1	Base Frame Assembly PN 2020486-02

1	AZ/EL Cap Mount (Mo. 6031) PN 6010017**		*Must Include Brand Name and LNB dB rating. **Model 6920, 1.0m & 6922, 1.2m Antenna System only.

BOLT TORQUE

**APPLY 24 N-m (18 FT.-LBS.)
OF TORQUE TO M8 BOLT**

GRADE 8.8 (8G) - GOLD COLOR

M6	M8	M10	M12	M16	M20
9.5 N-m	24 N-m	43 N-m	79 N-m	195 N-m	353 N-m
7 FT.-LBS.	18 FT.-LBS.	32 FT.-LBS.	58 FT.-LBS.	144 FT.-LBS.	260 FT.-LBS.

EXCEPTIONS:

M8 x 60	Round Head Square Neck Bolt (Securing Antenna to AZ/EL Cap)	16 N-m (12 ft-lbs.)
M6 x 20	Hex Head Bolt (Securing Clamp to Junction Block)	5.4 N-m (4 ft-lbs.)
M6 x 30	Hex Head Bolt (Securing Side Feed Legs to Junction Block & Antenna)	5.4 N-m (4 ft-lbs.)

SITE SELECTION

The first and most important consideration when choosing a prospective antenna site is whether or not the area can provide an acceptable "look angle" at the satellite. A site with a clear, unobstructed view is required. Your antenna site must be selected in advance so that you will be able to receive the strongest signal available.

The roof section must be flat and of sufficient area for the base of the roof mount (see ballast requirement and location chart for base size).

The roof section must also be able to withstand the weight of ballast, antenna and mount assembly.

Distributed loads (lb./sq.ft.) and total dead load are shown on Chart, pages 15-20, for your consideration. It is the customer's responsibility to make sure distributed loads of this product do not exceed roof design load. **If you do not know your roof design loads, consult a professional engineer.**

ASSEMBLY & INSTALLATION

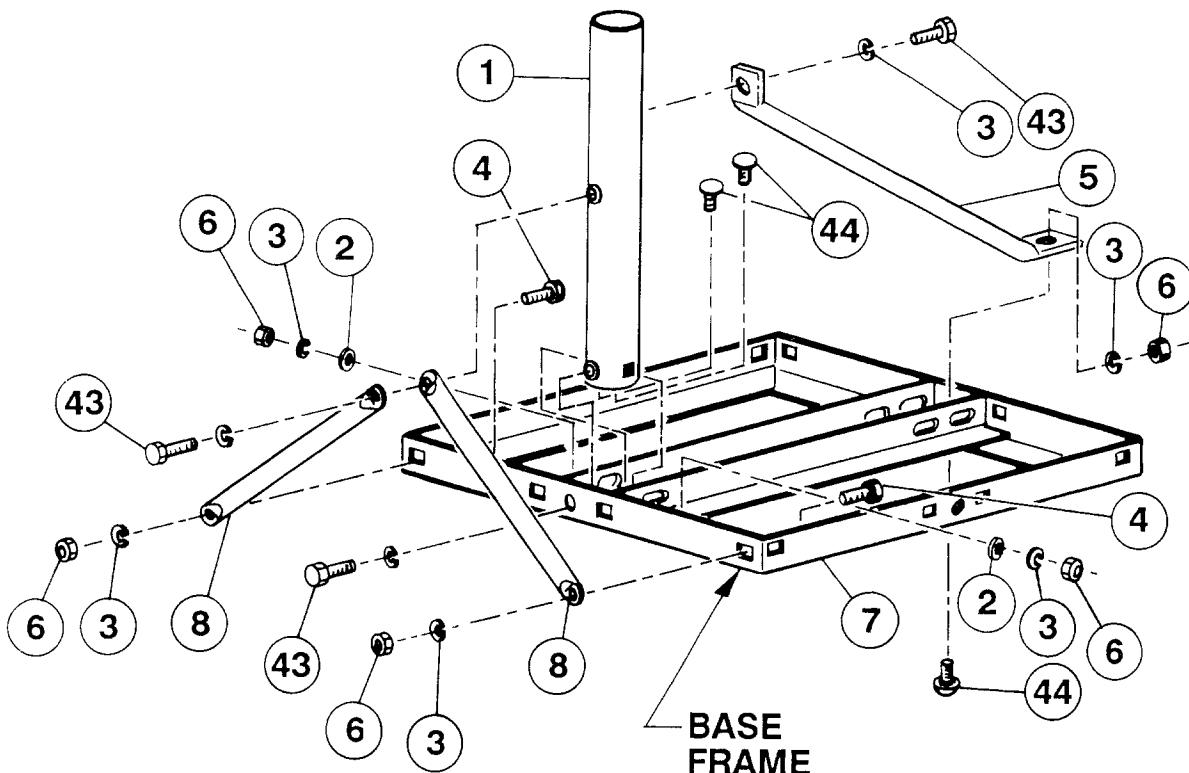

FIG. 1.1 - NON-PENETRATING POLE MOUNT, MODELS 6523, 6920 & 6922

NON-PENETRATING POLE MOUNT

NOTE: 10mm tools fit M6 hardware and 13mm tools fit M8 hardware. Refer to "Assembly Tools Required," on Page 4 for additional tools needed for assembly and installation. A "Hardware Sorter" is provided, on Page 24 to help you identify hardware size. See Page 4 for a "Pre-installation Checklist".

Clear roof of all debris, gravel or other loose materials. It is recommended that a layer of roofing paper be placed under the base of the roof mount.

Place roof Mount on roof and swing mast up to the vertical position. Secure mast (1) to base frame (7) with two M8 x 25 round head bolts (44), lock washers (3), flat washers (2), and hex nuts (6). Do not tighten.

Swing side braces (8) down and align holes in braces with holes in base frame(7). Secure with two M8 x 20 hex bolts (4), lock washers (3) and hex nuts (6). Refer to Fig. 1.1 Do not tighten.

Assemble rear brace (5) to mast (1) and base frame (7) as shown in Figure 1.1. Secure with one M8 x 25 hex bolt (43) and lock washer (3). Secure rear brace to base frame with one M8 x 25 Rd HD Sq NK (44), lock washer (3) and hex nut (6) as shown in Figure 1.1.

Tighten and torque all hardware, including the bolts securing brace to mast and mast to the base frame, to 16 N-m (12 ft.-lbs.). Refer to Bolt Torque Chart, Page 5.

AZ/EL CAPS MOUNT

As the AZ/EL cap mount is factory pre-assembled, there is no assembly required for the mount. Refer to Bolt Torque Chart, page 5.

ASSEMBLING ANTENNA TO CAP MOUNT

Install four M8 x 60 (2½ in.) round head, square neck bolts (9) into holes in center of antenna and cap mount flanges (Reference Fig. 1.4). Install four lock washers (3) and hex nuts (6) on bolts.

IMPORTANT: Tighten and torque to 12 ft.-lbs. (16.3 N-m), do not overtighten.

NOTE: Bottom feed leg hole to be located as shown in Figure 1.4.

INSTALLING CAP MOUNT ONTO MAST

Lift antenna/cap mount assembly and slide cap mount onto mast tube (Reference Fig. 1.5). Face of antenna should be parallel to front of base.

Tighten M8 clamp nuts so that the antenna/cap mount assembly is held stationary on mast, but can be swiveled with slight pressure.

FEED, FEED LEGS AND LNB INSTALLATION

Assemble feed assembly and feed legs to antenna as shown in Fig. 1.6 (Page 8).

Insert bottom feed leg (38) into hole in bottom edge of antenna (36). NOTE: Bottom feed leg is the one with a slight bend on one end of leg, lance on opposite end, and is shorter than the two side legs (34).

Install side legs (34) to antenna, from back side of antenna, and secure with M6 x 30mm (1/4" x 1-3/16") hex bolts and 1/4" flat washer (27 & 26). Do not tighten.

Insert one side leg (34) into junction block (31) and secure with M6 x 30mm (1/4" x 1-3/16") hex bolts and 1/4" flat washer (27 & 26). Do not tighten.

Insert bottom leg (38) into hole on center of junction block (31) until lance on leg is engaged.

Insert opposite side leg (34) into junction block (31) and secure with M6 x 30mm hex bolt and 1/4" flat washer (27 & 26). **Tighten and torque bolts securing side legs to junction block and antenna to 4 ft-lbs.(5.4 N-m).**

Assemble horn, junction block (31) and clamp using two M6 x 20mm bolts and M6 flat washers (10 & 41) as illustrated in Fig. 1.6 & 2.0 (Pages 8 & 9).

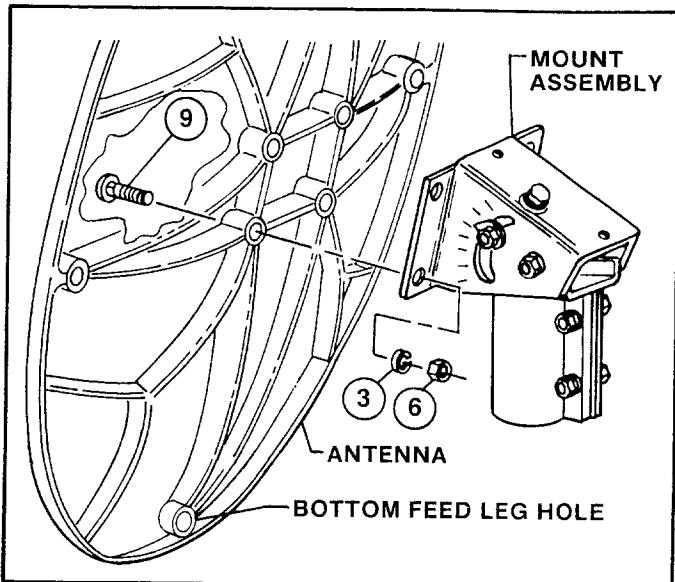

FIG. 1.4—ASSEMBLING ANTENNA TO AZ/EL CAP MOUNT

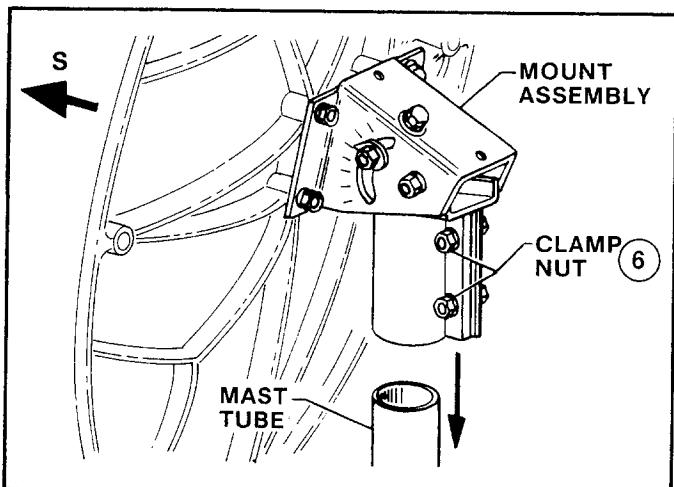

FIG. 1.5 - INSTALLING ANTENNA/MOUNT ASSEMBLY ONTO MAST

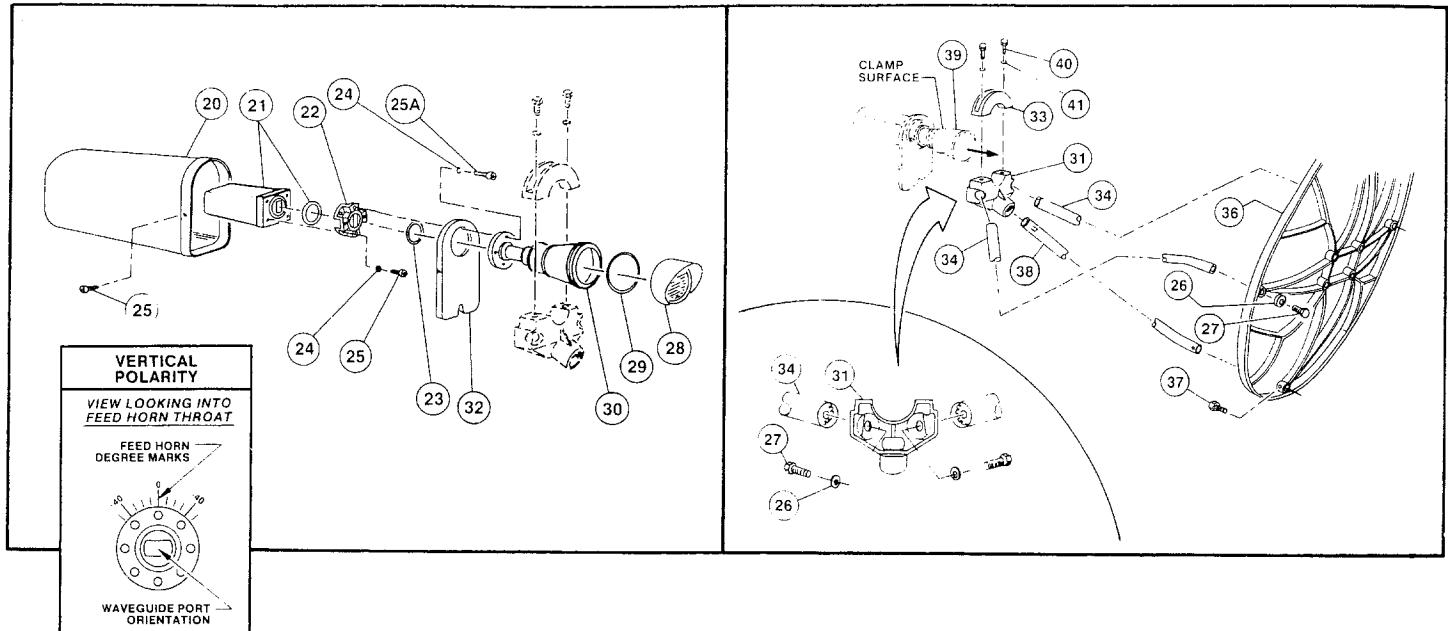

FIG. 1.6 - INSTALLATION OF FEED AND FEED SUPPORT LEGS TO ANTENNA

Assemble feed assembly (39) to junction block (31) as shown in illustration.

Remove cover (20) from feed assembly (39).

Feed models with LNB's are factory assembled as shown in Figure 1.6. For models not supplied with LNB's refer to instructions packed with feed.

IMPORTANT: Sealing RF coaxial connector:

The copper-plated center conductor in the RF coaxial cable, which connects receiver to LNB, can experience electrolysis corrosion at the LNB connector. Moisture and DC current cause this type of corrosion. To prevent corrosion, apply a moderate coat of silicon grease to the center conductor and then wrap the entire connection with **COAX-SEAL®** tape to seal.

(COAX-SEAL® IS A REGISTERED TRADEMARK OF UNIVERSAL ELECTRONICS, INC.)

Use bottom feed leg (38) as conduit and route coaxial cable up through leg. Leave approximately 305mm (12") length beyond junction block. Install "F" connector onto cable and assemble to LNB.

Make sure feed cable is in the groove on bottom of header (32) and install cover (20). Secure with two M4 screws (25).

Be sure bottom feed leg (38) is seated and tighten hex screw (37) on boss, rear of antenna, securing leg to antenna.

GROUNDING

NOTE: ALL INSTALLATIONS TO CONFORM TO LATEST ISSUE OF NATIONAL ELECTRIC CODE.

Ground antenna mount assembly and feed cables in accordance with current National Electric Code and local electric codes. Figure 1.7 illustrates typical grounding methods.

Clamps that provide a solid connection between ground wire and ground source should be used.

Tighten and torque all hardware as shown in Torque Chart on page 5.

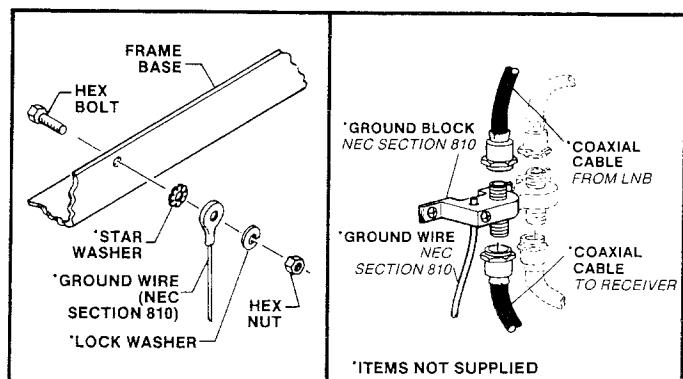

FIG. 1.7- TYPICAL GROUNDING ANTENNA MOUNT ASSEMBLY & FEED CABLES

ANTENNA ALIGNMENT PROCEDURE

The three adjustments necessary to align the antenna are:

- (1) Polarization of the feed (Ref. Fig. 2.0).
- (2) Elevation (Ref. Fig. 2.1). See Charts, Pages 11-14.
- (3) Azimuth (Ref. Fig. 2.2 & 2.3). See Charts, Pages 11-14, for appropriate values.

POLARIZATION OF THE FEED

Polarization of feed is obtained by using a 10mm nut driver and loosening two M6 x 20mm clamp bolts (40) and turning feed. Align alignment mark on clamp with "O" (zero) mark on horn scale (Ref. Fig. 2.0). The polarization setting for the satellite is shown on Pages 11-14. Make sure clamp is installed with arrow pointed toward antenna as shown in Fig. 2.0. Keep cable grove on header in the down position when adjusting polarization.

NOTE: Single Polarity Feed is factory assembled for vertical polarity. If horizontal polarity is desired, rotate feed 90° clockwise or counter-clockwise from values shown in charts on pages 11-14.

ELEVATION

To obtain elevation value for your satellite, refer to charts on Pages 11-14. Loosen bolts in curved slots (both sides), and pivot bolts (both sides) of AZ/EL Housing 1/4 turn (Ref. Fig. 2.1). Turn elevation adjustment bolt clockwise to decrease elevation and counterclockwise to increase elevation. Align the pointer with appropriate mark at the desired elevation reading (Ref. Fig. 2.1). This will be an approximate setting. Optimum setting achieved when fine tuning. Temporarily tighten elevation bracket nuts.

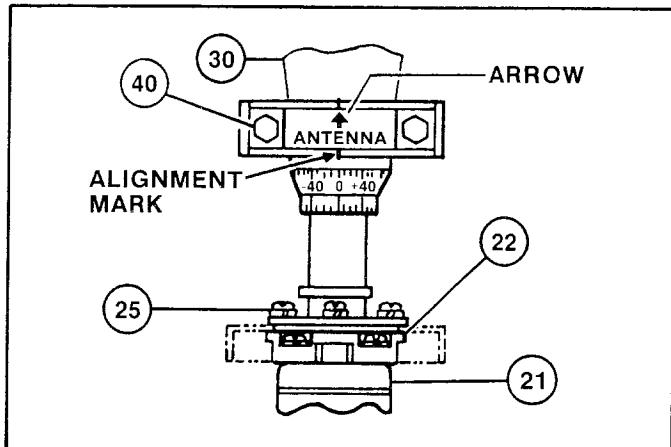

FIG. 2.0 - POLARIZATION OF THE FEED

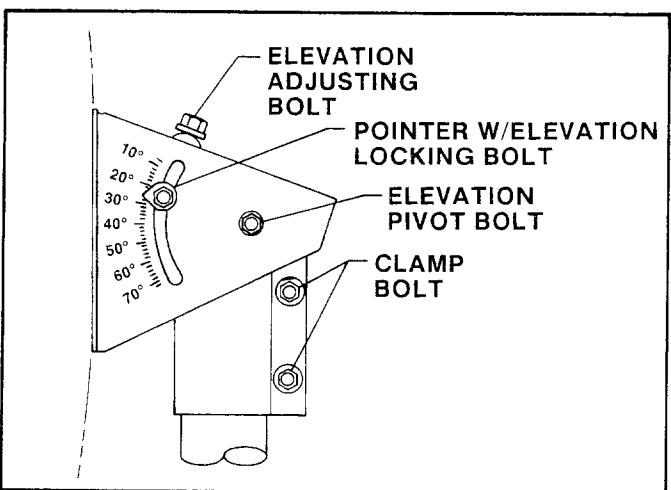

FIG. 2.1 - SETTING THE ELEVATION

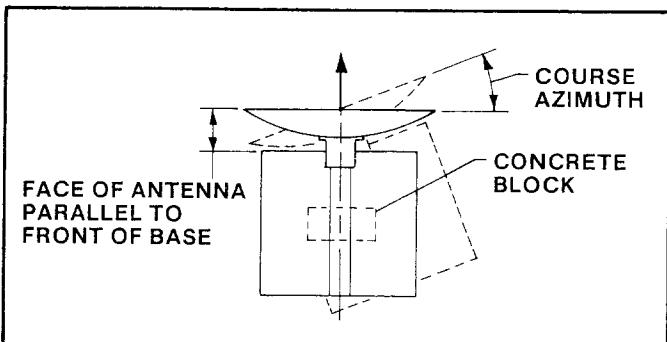

FIG. 2.2 - ROTATING ANTENNA AND BASE FOR COURSE AZIMUTH SETTING

AZIMUTH

Obtain azimuth for your satellite from charts on Pages 11-14. Face of antenna should be parallel to front of base frame (Refer to Fig. 2.2). Temporarily place a concrete block on base frame during course azimuth adjustment. Rotate antenna and base frame assembly, pointing it to the correct compass reading for your location and satellite. Slowly sweep antenna and base frame in azimuth until a signal is found. If desired signal is not found, increase or decrease elevation setting and repeat the above procedure until the desired signal is found.

WARNING: Do not rotate antenna and cap mount on mast to obtain course azimuth setting. To do so will greatly reduce allowed wind speed values shown in charts on Pages 15-20.

BALLAST

Referring to the ballast requirements and location chart, Pages 15-20, add the number of concrete blocks for ballast to base frame. Take care not to move base when adding ballast.

FINE TUNING

Use a signal strength measuring device for final adjustments to obtain maximum antenna performance. Alternate between elevation and azimuth fine tuning to reach maximum signal strength, until no improvement can be detected. When fine tuning azimuth, rotate antenna and cap mount on roof mount mast. Refer to Figure 2.3.

Slowly rotate feed to obtain maximum signal strength for polarization setting.

Tighten and torque all hardware (Refer to Torque Chart, page 5). **IMPORTANT:** Torque bolts (24) securing half clamp to junction block (29) to 5 N-m (4 ft.-lbs.) maximum.

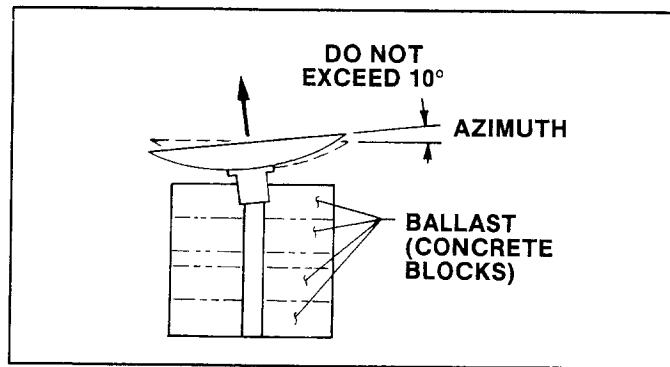

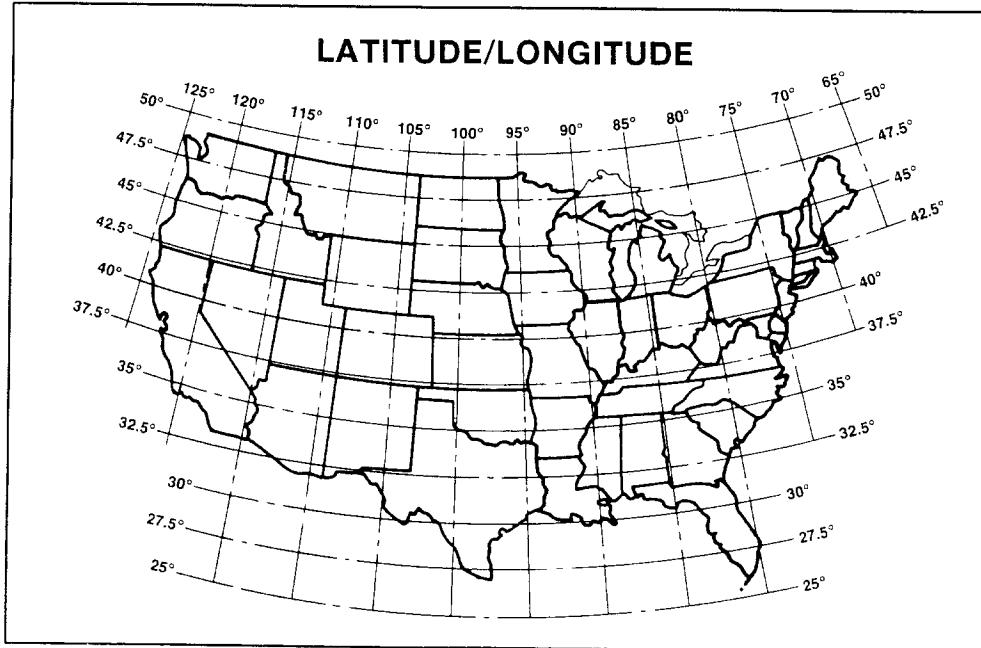

FIG. 2.3 - FINE TUNING AZIMUTH SETTING USING CAP MOUNT

ADDENDUM TO
800029201 & 800035001
NON-PENETRATING MOUNT SYSTEMS
INSTALLING GROUND LUG &
GROUNDING NPM

GROUNDING THE NPM FRAME

Perform the following steps and ground the NPM assembly in accordance with current National Electrical Code and local codes.

1. Install the ground lug onto the NPM frame base using the self-tapping hex head screw as shown.
2. Install $\frac{5}{16}$ " tooth washer between M8x Hex Head Bolt and Frame as shown.
3. Insert one end of the ground wire through the ground lug (see above illustration).
4. Tighten the ground lug clamp screw until the ground wire is secure.
5. Refer to the National Electric Code (NEC) Section 810 and local electric codes for the specific instructions on grounding the remaining end of the ground wire.

				C	135	125	116
48	1 THRU 48	1612	83.8	B	—	—	—
				C	—	133	125

NOTES:

- 1 - BALLAST CONSISTS OF 8" x 16" x 4" NOMINAL CONCRETE CAP BLOCKS WEIGHT OF 32 LBS EACH PLUS 76 LBS FOR WEIGHT OF ANTENNA AND MOUNT.
- 2 - BALLAST CALCULATED TO MEET UNIFORM BUILDING CODE EXPOSURE B OR C.
- 3 - BALLAST BASED ON OVERTURNING REQUIREMENTS AND AZIMUTH SETTING PER INSTRUCTIONS ON PAGE 10. TO INSURE AGAINST SLIDING TETHER AS SHOWN IN DETAIL ON PAGE 16.
- 4 - WHEN TABLE 2, PAGE 16, IS USED, IT IS REQUIRED THAT A 3/8" CERAMAR FOAM PAD (PART NUMBER PPM-53X53) BE ATTACHED TO THE BOTTOM OF THE BASE FRAME WITH 3M SUPER 77 SPRAY ADHESIVE. THE FOAM PAD WILL PROVIDE THE COEFFICIENT OF FRICTION SHOWN AND PROTECT THE ROOF FROM PUNCTURE. WIND SPEED IN TABLE 2 BASED ON WORST CASE FRICTION COEFFICIENT AND 1.5 SLIDING AND OVERTURNING STABILITY.

VSAT ANTENNA/MOUNT/LNB LIMITED TWELVE (12) MONTH WARRANTY

This CHANNEL MASTER® equipment is warranted to be free from defects in material and workmanship under normal use and service. CHANNEL MASTER shall repair or replace defective equipment, at no charge, or at its option, refund the purchase price, if the equipment is returned to CHANNEL MASTER not more than twelve (12) months after shipment. Removal or replacement of equipment and its transportation shall not be at the cost of CHANNEL MASTER except CHANNEL MASTER shall return repaired or replaced equipment freight prepaid.

This Warranty shall not apply to equipment which has been repaired or altered in any way so as to affect its stability or durability, nor which has been subject to misuse, negligence or accident. This Warranty does not cover equipment which has been impaired by severe weather conditions such as excessive wind, ice, storms, lightning, or other natural occurrences over which CHANNEL MASTER has no control. Nor shall this Warranty apply to equipment which has been operated or installed other than in accordance with the instructions furnished by CHANNEL MASTER.

Claimants under this Warranty shall present their claim along with the defective equipment to CHANNEL MASTER immediately upon failure. Non-compliance with any part of this claim procedure may invalidate this warranty in whole or in part.

THIS WARRANTY IS EXPRESSLY IN LIEU OF ALL OTHER AGREEMENTS AND WARRANTIES, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. CHANNEL MASTER DOES NOT AUTHORIZE ANY PERSON TO ASSUME FOR IT THE OBLIGATIONS CONTAINED IN THIS WARRANTY AND CHANNEL MASTER NEITHER ASSUMES NOR AUTHORIZES ANY REPRESENTATIVE OR OTHER PERSON TO ASSUME FOR IT ANY OTHER LIABILITY IN CONNECTION WITH THE EQUIPMENT DELIVERED OR PROVIDED.

IN NO EVENT SHALL CHANNEL MASTER BE LIABLE FOR ANY LOSS OF PROFITS, LOSS OF USE, INTERRUPTION OF BUSINESS, OR INDIRECT, SPECIAL OR CONSEQUENTIAL DAMAGES OF ANY KIND.

In no event shall CHANNEL MASTER be liable for damages in an amount greater than the purchase price of the equipment.
